TO WHOM IT MAY CONCERN

Ref.: Utsho Bhowmik

I am delighted to recommend Utsho Bhowmik, whom I have mentored as a student and research supervisee in the Department of Civil Engineering at Khulna University of Engineering and Technology (KUET). I taught him Environmental Engineering theory and sessional courses during his third year of undergraduate study, which allowed me to observe his academic abilities. Over the course of his undergraduate studies, I observed clear academic growth, reflected in his consistent performance and a notable improvement in his final semester, where he achieved a GPA of 3.53/4.00, contributing to an overall CGPA of 3.27/4.00. I later supervised his undergraduate thesis and worked with him as a co-author on a research paper derived from his thesis work. He is one of the most capable undergraduate researchers I have supervised in recent years, ranking within the top 10-20% of students I have mentored.

In his final year, I had the opportunity to supervise his undergraduate thesis titled “Modeling of Long-Term Chromium (Cr) Migration Assessment from Rajbandh Open Landfill: A Case Study.” During his thesis, he conducted field sampling, performed laboratory analysis to determine chromium (Cr) concentrations, and developed numerical models using MODFLOW and MT3DMS to simulate long-term contaminant transport along with groundwater flow simulation. His model provided important insights into long-term chromium migration and potential groundwater contamination risks in the study area. It is relatively rare for an undergraduate student to demonstrate competence across fieldwork, laboratory experimentation, and computational modeling, yet he managed all three with dedication and precision. He required minimal supervision and consistently demonstrated the ability to work independently across different stages of the research. This work was later developed into a research article and published in the journal “Water Practice and Technology” (IWA Publishing), which reflects both the quality and relevance of his research.

I observed his collaborative attitude during environmental engineering sessional courses, where he worked well with peers, contributed actively, and maintained a responsible and professional approach in group settings.

He also possesses strong scientific writing skills. His contribution to drafting and refining the research manuscript was significant, and his ability to communicate technical findings clearly was instrumental in achieving publication. This level of writing proficiency at the undergraduate stage is uncommon and will serve him well in graduate research.

Mr. Utsho is fully capable of undertaking independent graduate level research. He has demonstrated the ability to independently conduct fieldwork, laboratory analysis, and advanced numerical modeling, along with the intellectual curiosity and discipline required for sustained research.

I strongly recommend him for admission to your graduate program with the utmost confidence. I am confident that he will make meaningful contributions in the field of environmental and water resources engineering.

Please feel free to contact me if further information is required.

Sincerely,

Dr. Md. Saiful Islam

Professor, Department of Civil Engineering
Khulna University of Engineering and Technology (KUET)
